

TFFC (Middelpunt) Fishery Report for the 2017/2018 Season

Summary

The weather and rainfall conditions during the last season were favourable with good rains and full dams. Although the same weight of fish was stocked as in the previous 3 years the average size stocked was up and therefore fewer fish were placed in the dams. 1964 rainbows and 100 browns were stocked. A total of 436 trout were killed and 938 were released during the season.

Following a period of 3 years when no browns were available we were able to stock browns in the last 2 years and this will be repeated in August 2018.

Recapture rate was up on last year for both rainbows and browns, but total recapture rate was still down on the period prior to 2015/16 season probably due to heavier predation by cormorants and otters.

There was little change in occupancy.
