

## TFFC (Middelpunt) Fishery Report for the 2019/2020 Season

### Summary

Our dams were at a reasonable level throughout the season although at times summer temperatures were excessively high. Due to the lockdown fishing ceased after the weekend of March 21/22 which meant that there was no fishing during the prime fishing and holiday period of 10 weeks up to May 31 when the season ended. 1238 rainbows and 232 browns were stocked. Of this total of 1470 stocked 298 were killed and 670 released.

The stocking of browns was increased to 19% of the total. Although the recapture rate for browns is significantly lower than for rainbows this was to introduce more variety to the fishing. In addition, this species tends to be more highly sought after by anglers, and because browns are longer lived than rainbows it is hoped that this will result in a higher proportion of trophy fish.

There is no doubt that predation due to both white breasted cormorants and spotted neck otters has had a significant impact on the fish population in the last 5 years.
